Projects

Authenticated_MVC_APP • [↗](#)

A clean, structured ASP.NET Core MVC project showcasing the Model–View–Controller pattern, Entity Framework Core migrations, and Razor views.

Video Game Character API • [↗](#)

Backend API, includes search/filtering, and secure authentication for video game character data. Implemented core business logic, data validation, and role-based access control; designed for scalability and easy integration with game frontends.

ClickCart – E-Commerce Backend API • [↗](#)

ClickCart is a scalable Node.js backend for online shopping platforms. Includes JWT authentication, Stripe payments, RESTful endpoints, with excellent error handling for the whole app.

Nest.js RESTful API – TypeORM & PostgreSQL Integration • [↗](#)

Developed a high-performance backend with Nest.js and TypeORM, utilizing PostgreSQL as the primary database. The project features a containerized environment using Docker Compose, structured modular architecture, and robust data integrity through DTOs and validation pipes
